

Network Mapping

Sarin Suwanpakdee

Network building in common

01

A shared goal and clear vision of what they wanted to do

03

A strategic but adaptable plan to balance resources with the mission

02

A core, small group of people who maintained interest, enthusiasm, and momentum

04

Good relationships and trust

Why does a national wildlife health program need a network?

Reason 1

Expected to collaborate with others to form a unified perspective at a national level

Reason 2

No individual organization possesses sufficient knowledge or perspective to achieve a comprehensive understanding

Network building will go through stages

01 Ambiguity and Confusion

- Why am I here?
- Who are these other people?
- What are we trying to do?
- Do I want to work with them?

02 Acceptance

- Open communication
- Starting to confront tasks together
Figuring out how to work as a team
- Trust-building

01 Conflict

- Inter-personal conflict
- power struggles
- blaming others
- frustration in lack of control
- worry about the pace of change

02 Getting it done

- Using strengths to go to the shared goal
- Trust
- Know how to work together

Some lessons to overcome the challenges of network building

Start with finding the common values and shared goals

Practice and support mutual respect

Find the advantages of different perspectives

Establish how decisions will be made early

Discuss the roles and responsibility of team members and how they work toward the shared goal

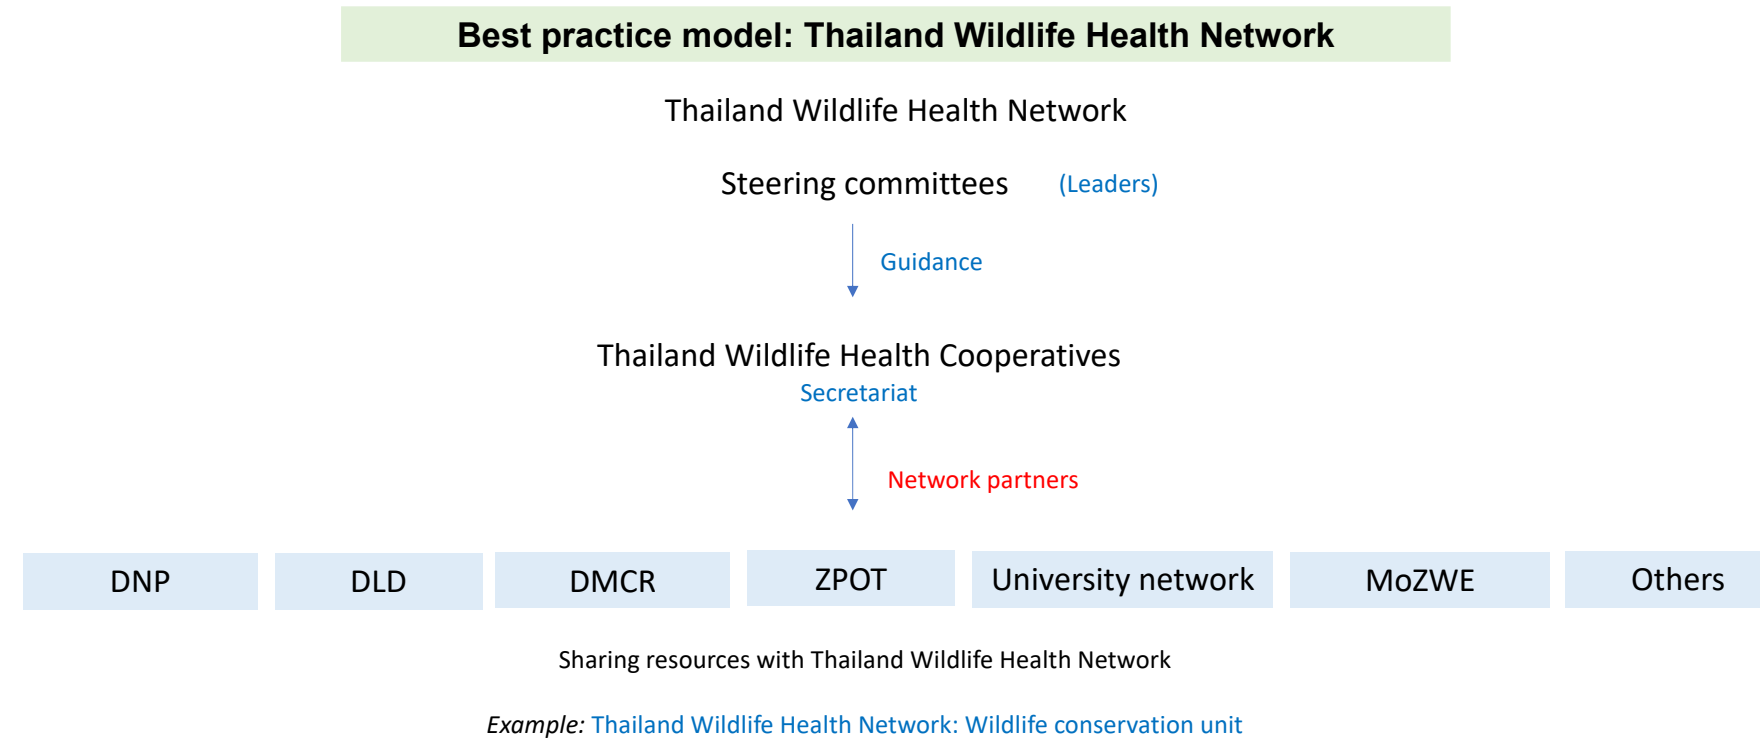

Food and drinks— build relationships and trust

World Organisation for Animal Health Twinning Project

A meeting for policy-driven wildlife disease surveillance in Thailand: a collaborative wildlife health network

September 12, 2022

Proposed governance structure for Thailand Wildlife Health Network

All partners agreed to establish a wildlife health network and set up a steering committee at high and technical levels for the networks.

World Organisation for Animal Health Twinning Project

Workshop on Developing Strategy for Thailand Wildlife Health Network

July 13, 2023

Ideal vision “Wildlife network for one health, one planet”

- Policy engagement to strengthen the network
- Life-long learning for sustainable development
- Sustainable Wildlife Health Network

Activity: *Venue:* Miracle Grand Convention Hotel, Thailand (on-site)

Participants: Partners of Thailand-NWHC/MoZWE

Strategy and Goal for Wildlife Health Network

To strengthen network

Establishment of the network executive committee with representatives from all collaborators

Clarification of each partner's role and responsibility

Development of complete operation plans

Endorsement of MOU, agreement, or a DSA – data sharing agreement.

To Enhance Knowledge

Setting up the meetings to identify the target groups for the personnel development plans and the training topics

Developing the activity plans

Conducting the trainings, seminars, or workshops, both at local and international sites

Mutual agreement and collaboration are needed to establish the roles and knowledge, such as establishing the SOPs, guidelines, and protocols.

To sustain the network

Identification of the stakeholders (e.g., DLD, DMCR, DNP, DOF, universities, NGOs, and others).

MOU and data sharing agreement - Establishment of the executive committee with representatives from high-level or ministerial level from different collaborators and the endorsement of the MoU and the data sharing agreement.

Platform, database, alert system - Set up the working group for each different task; for example, the working groups for designing and generating the platform, the database system, and the warning system.

Establishing Thailand Wildlife Health Network

6 June 2024

High-level meeting

Challenges

**Changes in politics and
Internal organization**

Internal communication

Top-down & bottom-up
communication
