

ASF situation and control Measures in Cambodia

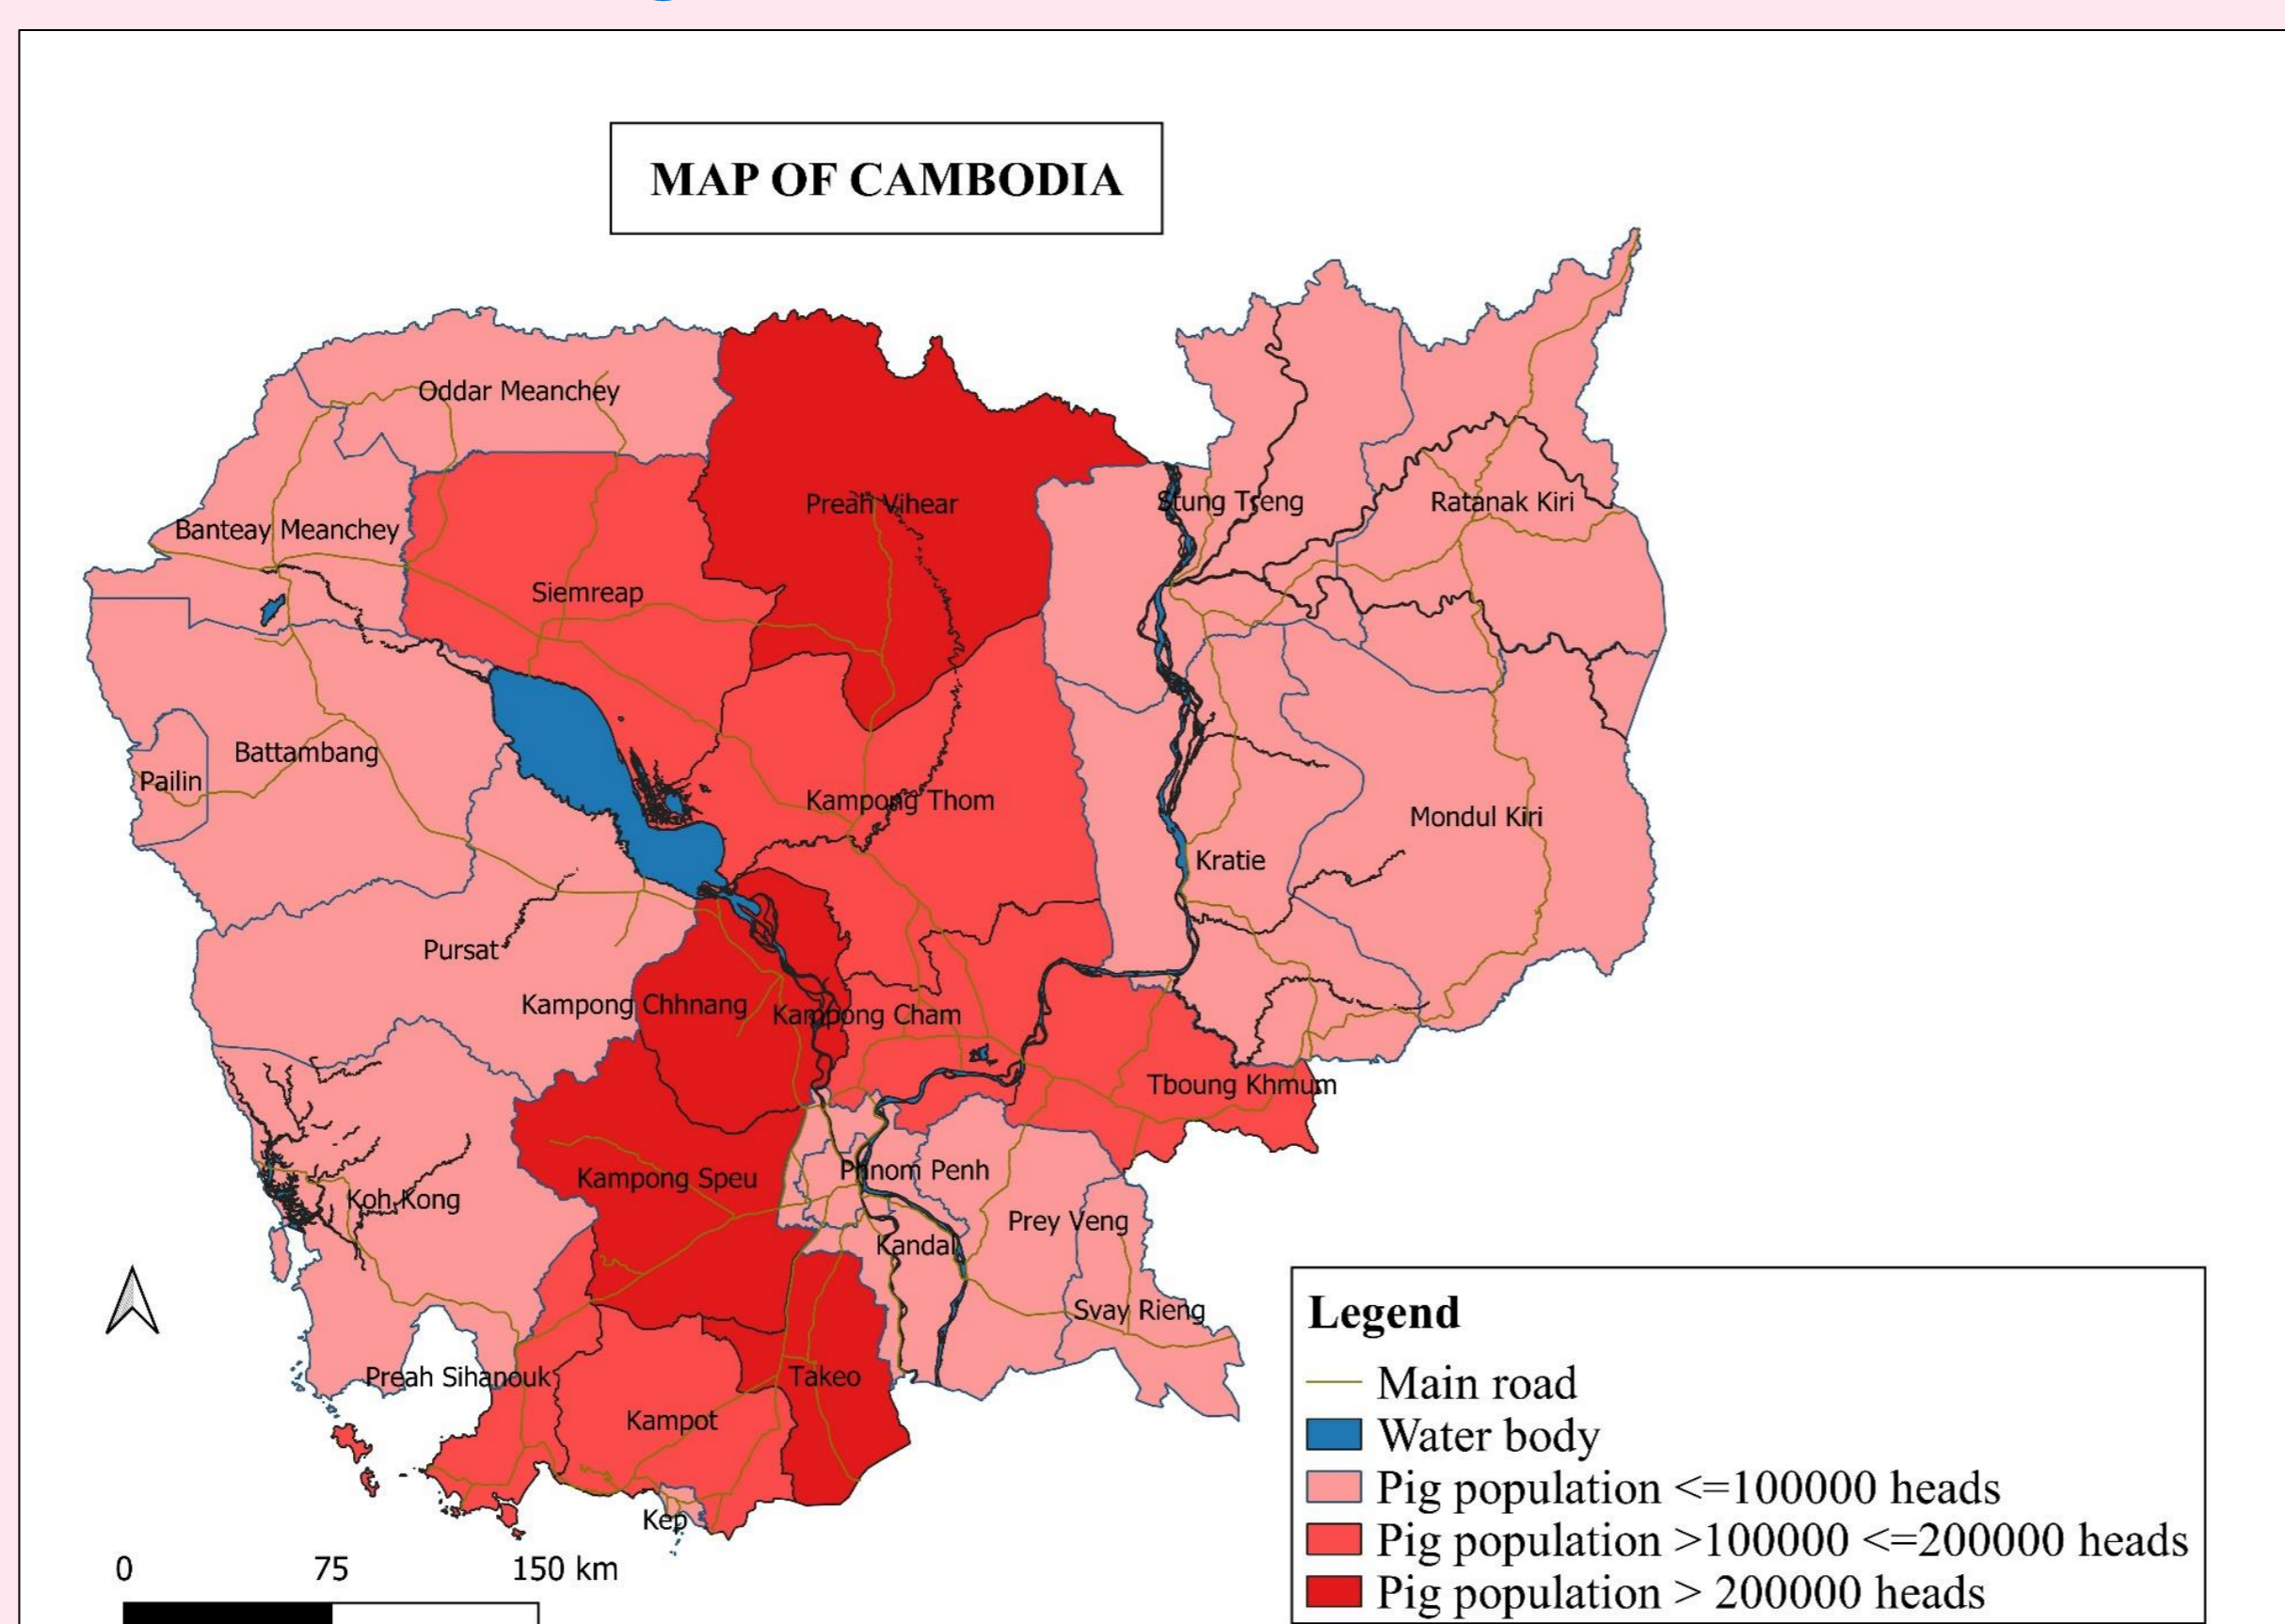

Peda Pich, Deputy Director, AVHPH

General Directorate of Animal Health and Production

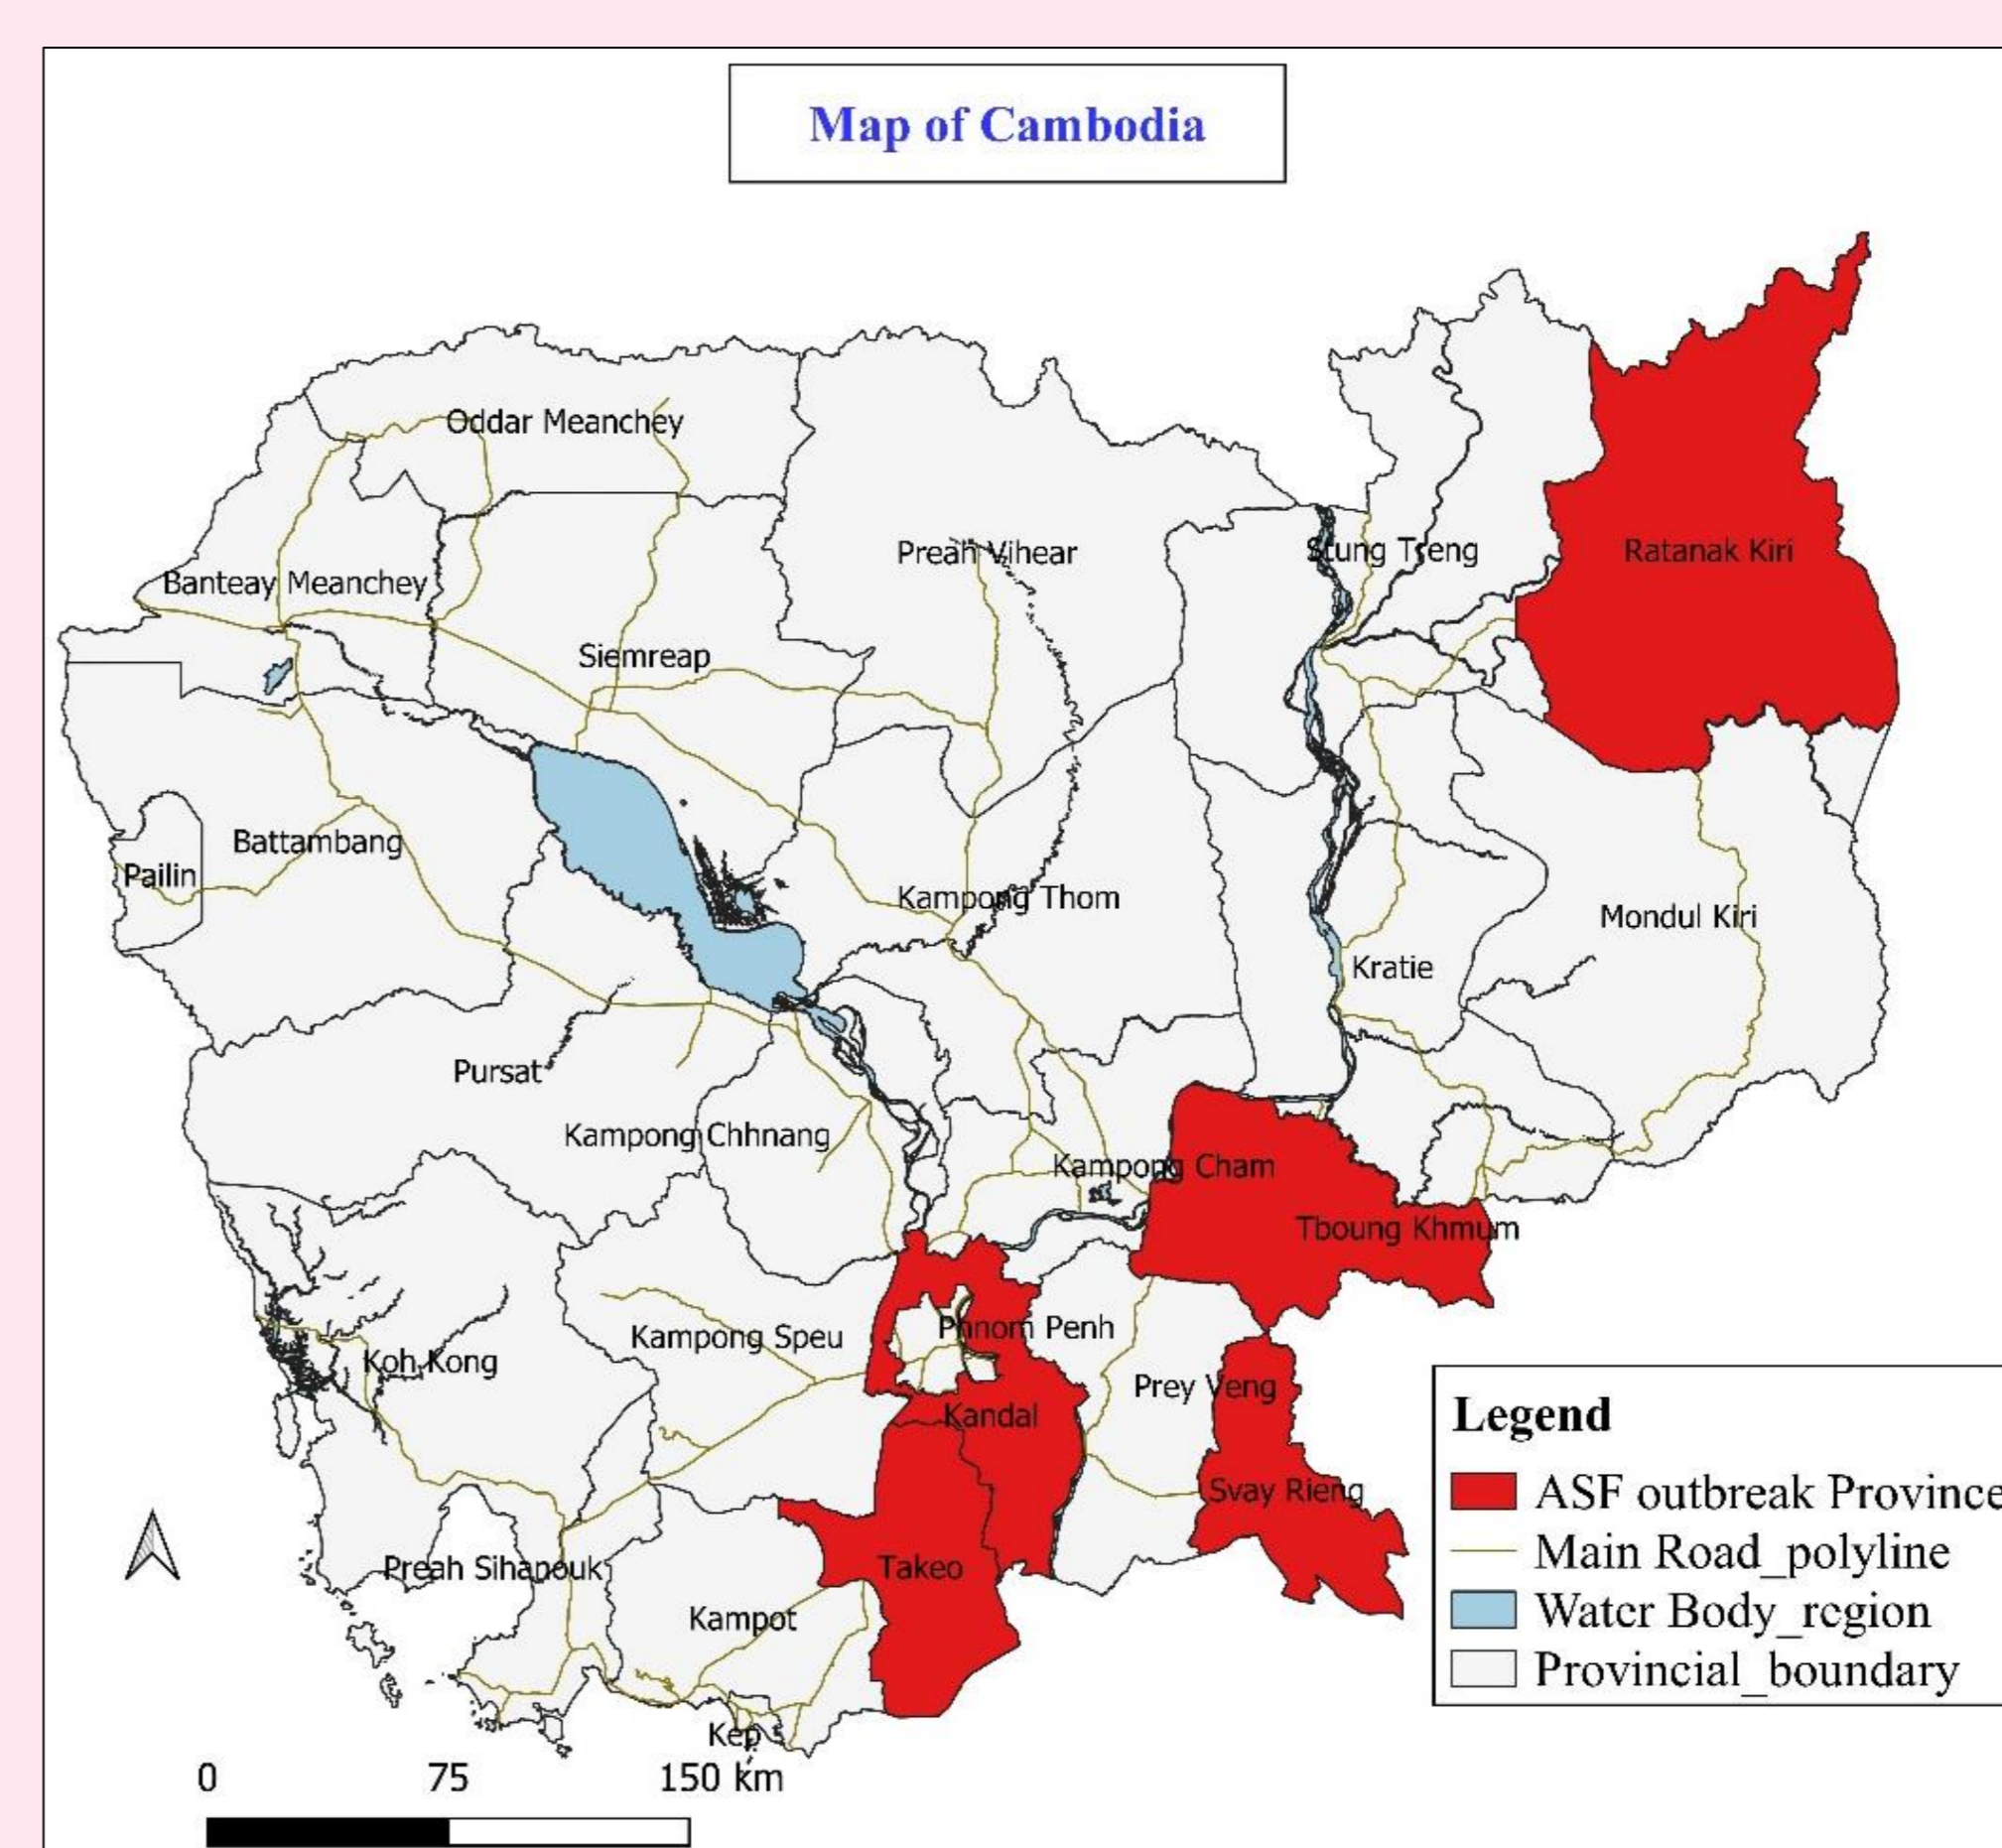

ASF SITUATION

Pig population

ASF Outbreak distribution

In March to July 2019, ASF outbreaks reported in 5 provinces which were in Rattanakiti, Tbong Khmum, Svay Rieng, Takeo and Kandal province. More than 500 pigs were death/ culled during the outbreak.

❖ **Legislation:** Law on Animal Health and Production, MAFF declaration, Pro# 134 178 227 343, Directive#232 of MAFF, 30 May 2019 on the urgent measures to monitor and control and illegal imported pig and pig production

❖ **Control Measure:**

- ✓ Disease outbreak investigation and surveillance: sample collection, Identify the possible risk areas and factors
- ✓ Disease outbreak response: Animal Movement Control, Culling, Disposal, Cleaning, public awareness
- ✓ Animal movement control: Check point for inspection of live animal importation

❖ **Capacity building:**

- ✓ Awareness programme and other technical support
- ✓ Biosecurity

ASF PREVENTION & CONTROL MEASURES

CONSTRAINTS & SOLUTIONS

Main Constraints

- ✓ No compensation
- ✓ It is a new disease without vaccine
- ✓ Limitation of understanding of farmers in disease control
- ✓ Distribution of infect pig meat within outbreak area and other in the forms of fresh, dried and fermented
- ✓ High number of backyard farm in the country
- ✓ Limitation of government budgets to implements ASF control and response

Solutions

- ✓ Staff capacity building especially on ASF control, prevention and response
- ✓ Strengthens the understanding of pig farms in disease control and biosecurity
- ✓ Improve knowledge on bio security practices in farm level, slaughterhouse and so on...
- ✓ Pilot ASF Compartmentalization, and education for all
