Building a Resilient Epidemiology Workforce for Transboundary Animal Diseases (TADs) Control

- FAO's Efforts in Strengthening Capacity Across the
Asia-Pacific

Hao Tang, PhD (Veterinary Epidemiology)

Emergency Centre for Transboundary Animal Diseases (ECTAD)
FAO Regional Office for Asia and the Pacific

Food and Agriculture
Organization of the
United Nations

Building a Resilient Epidemiology Workforce for Transboundary Animal Diseases (TADs) Control

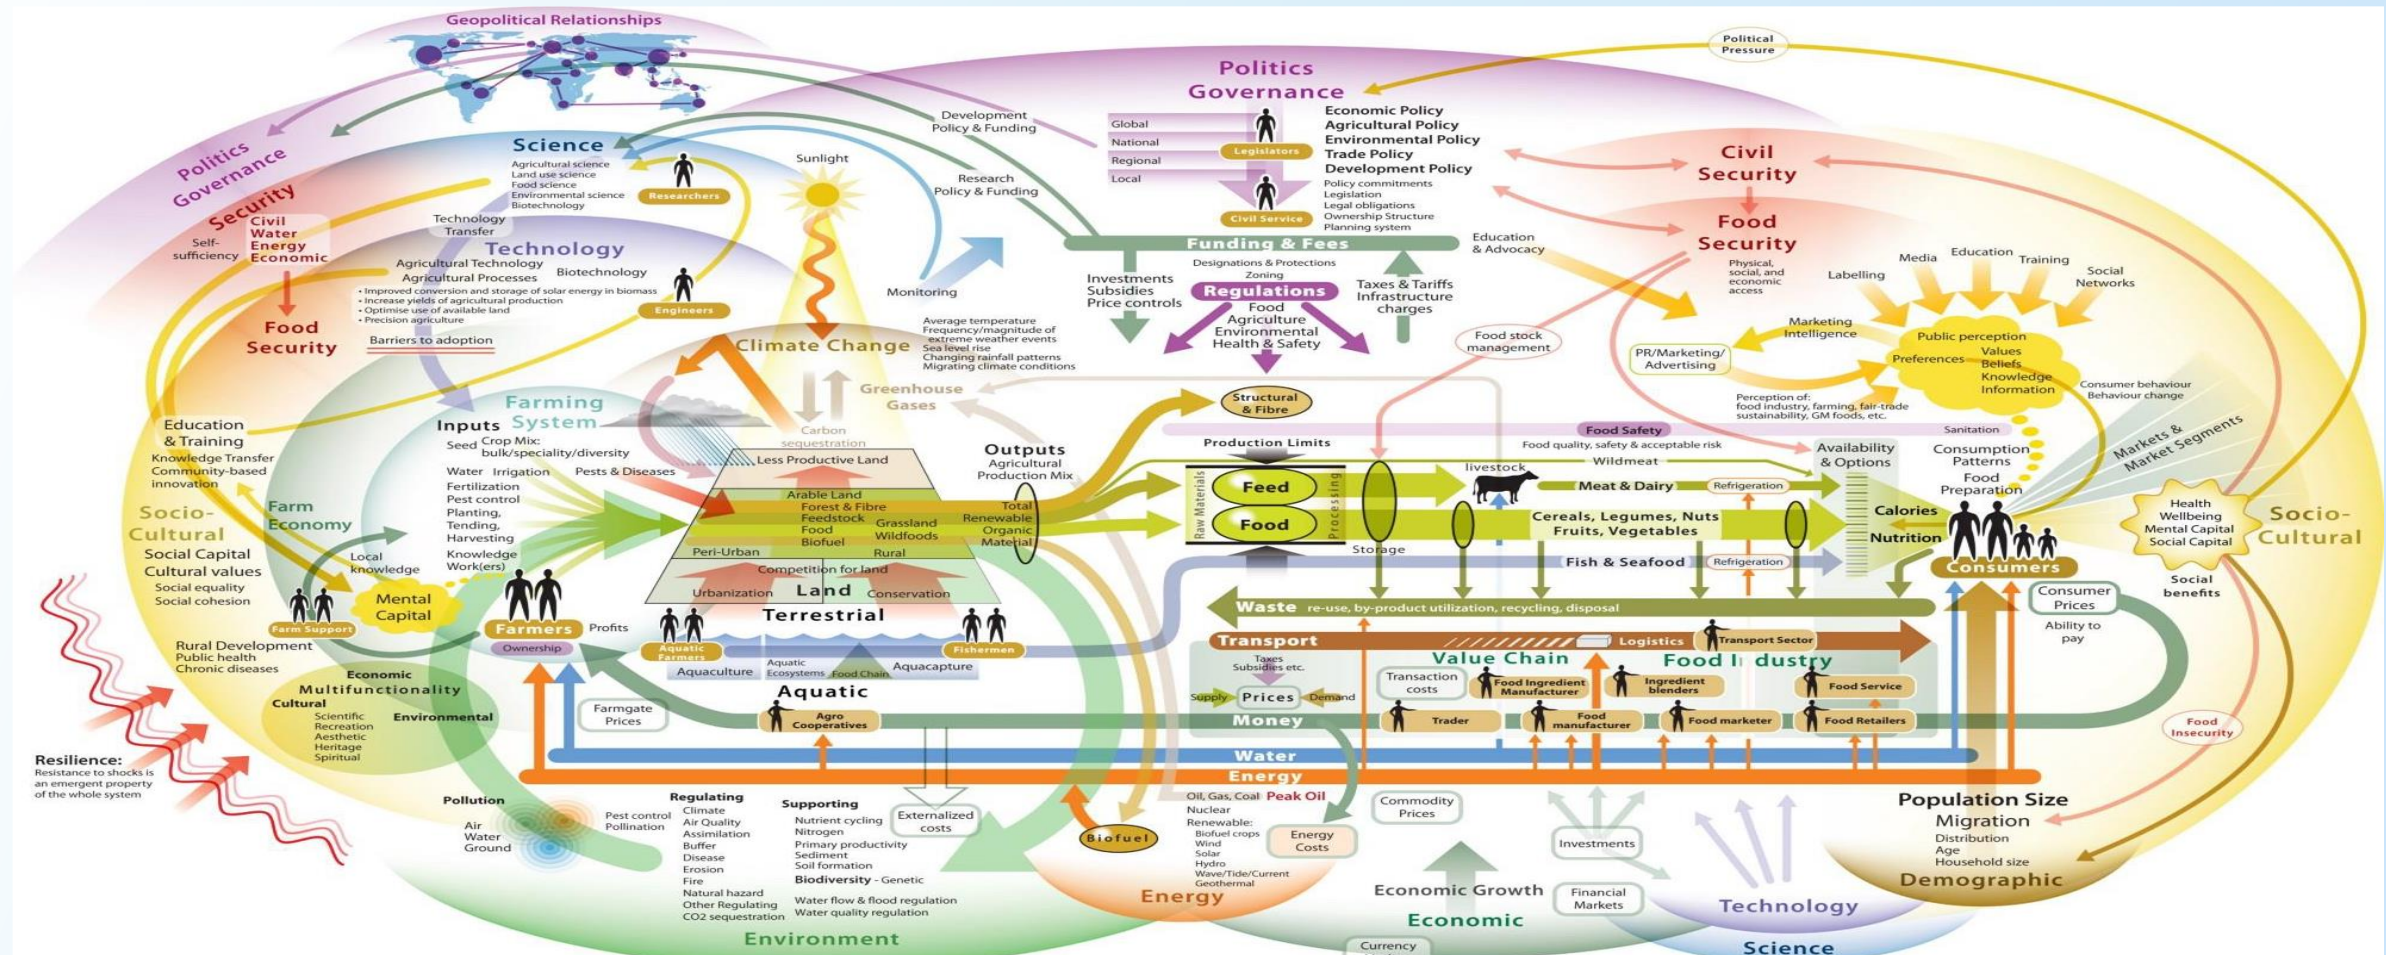

Epidemiology workforce?

Resilient Epi workforce?

How? - FAO's efforts

Strong national veterinary epidemiology capacity - Enhancing Animal Health Services in Complex Systems

Food and Agriculture
Organization of the
United Nations

What is Epidemiology Workforce?

More than just *Epidemiologists*

**All veterinary service personnel
tackling animal health threats**

What does “build Resilient Epi Workforce” mean?

Institutionalisation

**Clear, structured roles embedded
in veterinary service**

Not reliant on individuals

Service-Driven Applications

**Practical use of epidemiology to
support veterinary services**

Not just theoretical knowledge

Resilient Epi Workforce

Continuous Learning

**Ongoing mentoring and lifelong
learning**

Not just one-off training

Interdisciplinary & Cross-Sector Collaboration

**Joint efforts across sectors
through a One Health approach.**

Food and Agriculture
Organization of the
United Nations

How do we build Resilient Epi Workforce?

Institutionalisation-> Evidence-based workforce planning

Service-Driven Applications->Competency-based capacity building

Continuous learning->Peer-to-peer support network

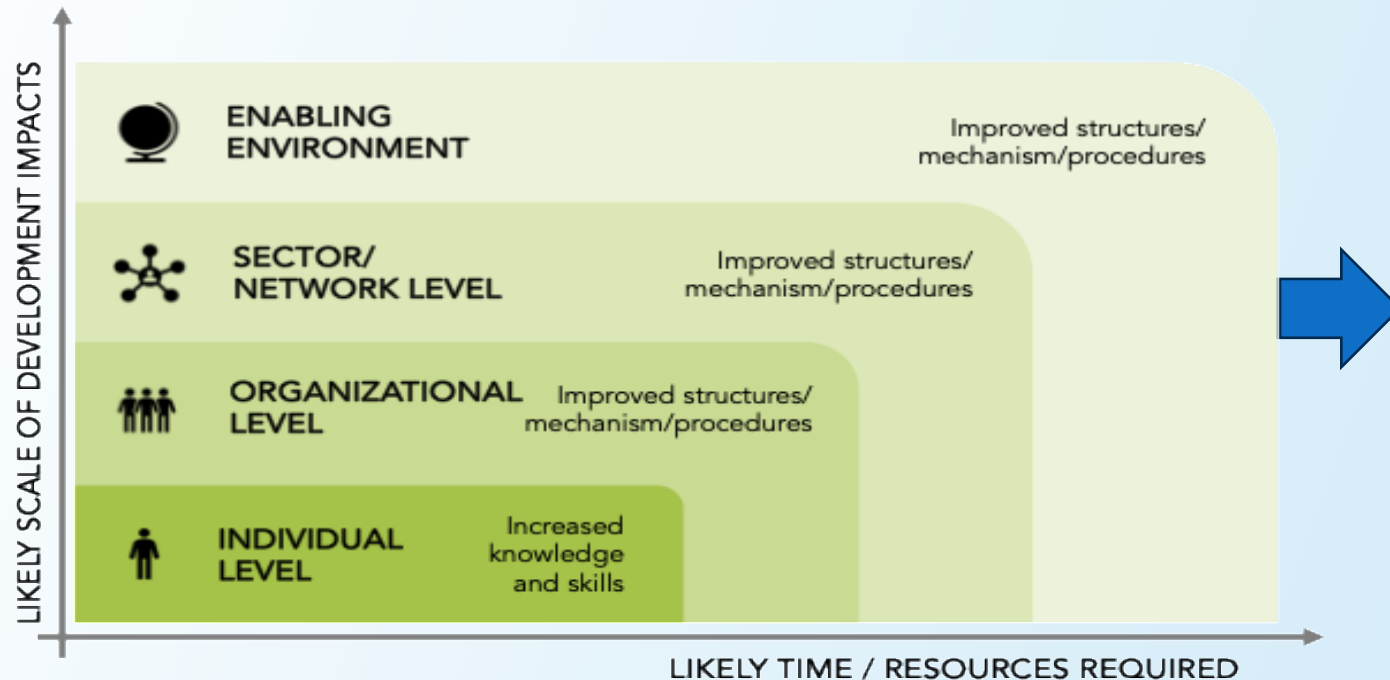

Interdisciplinary & Cross-Sector Collaboration->Knowledge sharing

✓ Institutionalisation-> Evidence-based workforce planning

Assist country to identify priority areas and roadmap

Epidemiology Mapping Tool (EMT)

01

Review **national epidemiology capacities** and identify strengths and challenges.

02

Develop **country-specific priority actions** to inform future improvements.

03

Provide a **standardized and repeatable process** for the assessment of veterinary epidemiology capacities.

04

Build staff capacities to use the EMT methodology to lead future assessments.

What outcomes does EMT offer?

EMT Key Principles

Launched upon **request** from the country to FAO

Focus on **identifying gaps and providing recommendations** for improvements

Consultative and **consensus building**

Flexibility to address **national priorities**

Complementary to existing assessment (PVS, JEE and LMT)

Re-assess over time

Example: Epidemiology Mapping Tool (EMT)

Field testing

Indonesia
Lao PDR
Nepal
Viet Nam

Implement

Bhutan (2017)
Mongolia (2018)
Indonesia (2021)
Philippines (2023)
Nepal (2023)

Express interests

Lao PDR
Pakistan
Cambodia

Food and Agriculture
Organization of the
United Nations

Service-Driven Applications->Competency-based capacity building

**Field Epidemiology Training
Programs for AH and OH
Professionals (FETPVs)**

Food and Agriculture
Organization of the
United Nations

In-service field epidemiology training for animal health and One Health

Program & geographical coverage

REGIONAL
R-FETPV

200 basic, intermediate & advanced-level graduates

from 13 countries

CHINA
C-FETPV

268 basic & intermediate-level graduates

31 provinces

126 advanced-level graduates

5 national institutes

INDONESIA
PELVI

77 basic & intermediate-level graduates

10 provinces

10 advanced-level graduates

27 districts

Field practices
(OIs + Epi studies)

REGIONAL
207

outbreak investigations & surveillance analysis

CHINA
INDONESIA

outbreak investigations

441

epi studies

INDONESIA

FETPVs – More Than Training: Learning by Doing

Core components

Training

Blending in-classroom and virtual learning
Hands-on field exercises

Application

Hands-on field practices
Post-training skills utilization

Advocacy

Engaging decision-makers and stakeholders
Demonstrating the training's service-enhancing potential

Supporting pillar

Building a national trainer/ mentor team

Creating a knowledge-sharing network

Backbone

Efficient training management

Consistently stakeholders engagement

Continuous learning->Peer-to-peer support network

Join the ENTRVST virtual hub!

Are you interested in veterinary epidemiology?

Strengthen your knowledge, connect with peers, and stay at the forefront of field practice with the ENTRVST virtual hub!

Join now

Learning
Centers**

One Health at the human-ecosystem-wildlife-livestock (HEWILI) interface

- Tutored course, can be customized for country

Contents

- An Introduction to One Health
- Potential Sources of Pathogens
- Drivers of Diseases at the Human-Environment-Wildlife-Livestock Interface
- Impacts of Infectious Diseases
- Introduction to Risk Analysis and the Joint Risk Assessment Operational Tool
- One Health Approach to Outbreak Investigation and Disease Control

Target audience

Professionals working in different institutions and with different backgrounds (animal health, public health, wildlife and natural resource management, and others).

Modality

- Tutored course
- 4 weeks. 3-4 hours/week
- Interactive modules 45 minutes (Approx.)
- PBL case studies relevant to the region
- Discussion forums to interact with tutors and peers
- Virtual sessions including webinars and workshops

Delivered in:

- Pacific region (SAP)
- Eastern Africa (SFE)
- Europe and Central Asia (REU)
- Near East and North Africa (RNE)
- Southern Africa (SFS)
