Agenda

1. Introductions
2. Objectives
3. The ARAHIS approach
4. Before 1 January 2025
5. From 1 January 2025
6. One-hour exercise
7. What reporting should be from 1st January 2025
8. Effective use of ARAHIS new mechanism since 1st January 2025
9. Exercises
10. Dashboard exercises
11. Next steps
12. Support for you
13. Post-training knowledge assessment

Introduce yourself by covering these key points:

- ✓ Your role in WOAHI (WAHIS) reporting.
- ✓ Your role in ARAHIS reporting.
- ✓ What you would like to get from today.
- ✓ Have you been using the new ARAHIS reporting approach?

Objectives

4

1. Know how to complete single portal (WAHIS) reporting for ARAHIS.

4. Get engagement for the ARAHIS approach.

2. Clear up misunderstandings on ARAHIS reporting.

5. Deal with any questions.

3. Share initial thoughts on the ARAHIS dashboard.

The ARAHIS approach

An overview of what happened with WAHIS and ARAHIS reporting before 1 January 2025 and how it changed after 1 January 2025

BEFORE 1 JANUARY 2025

WAHIS

Exceptional events: immediate notifications and weekly follow-up reports.

Six-monthly reports: presence or absence of listed diseases; occurrence code, quantitative data, control measures.

ARAHIS

Monthly update on 5 ARAHIS priority diseases in the ARAHIS platform
FMD, AI, CSF, Newcastle disease & rabies.

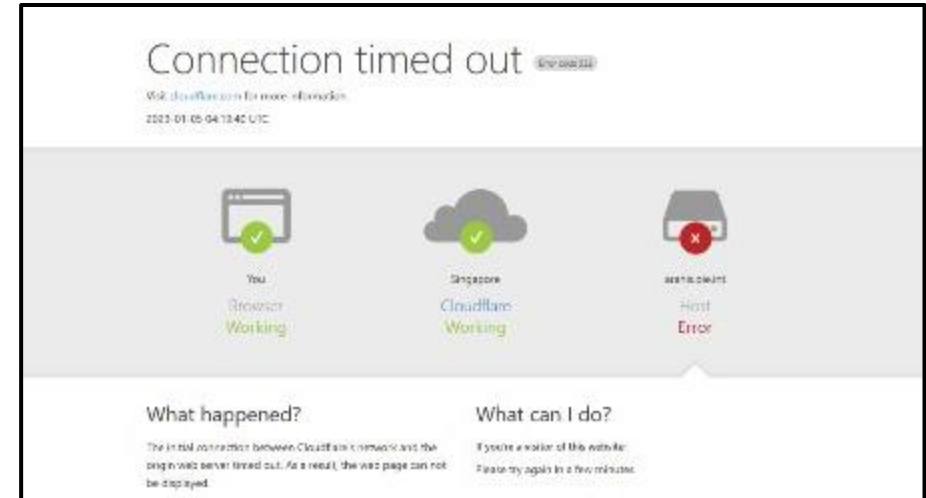

Disease situation for these diseases were available on the ARAHIS platform

- System was set up in 2006.
- Developed for use by 10 ASEAN Member States for priority diseases (i.e. FMD, AI, CSF, Newcastle disease, rabies).
- MOUs were signed between ASEAN and WOAAH to facilitate the interconnectivity between ARAHIS and WAHIS in 2008, 2011 and 2021.

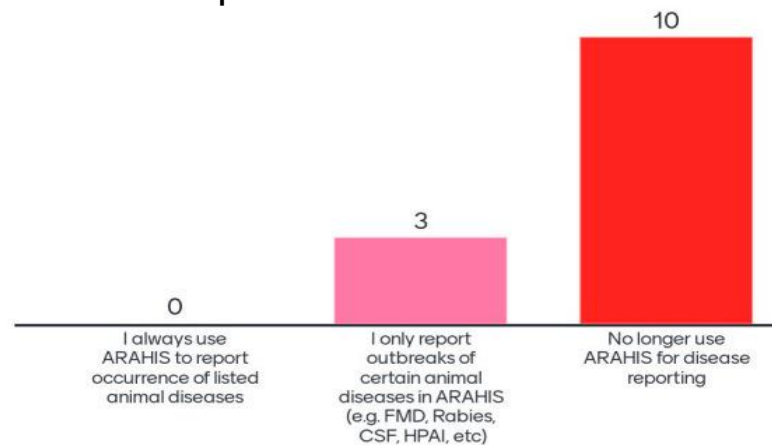

- System is outdated and unsupported.
- Members only report FMD (no reports in 2023).
- No backup plans.
- The system code is no longer available.
- Incompatibility with other systems (needs to be updated).
- Frequent failure to access.
- Emerging disease events required to report: ASF, LSD, AHS.
- Verification and validation no longer available.

How frequently do you use ARAHIS to report animal diseases?

World Organisation
for Animal Health
FOUR DICES 36

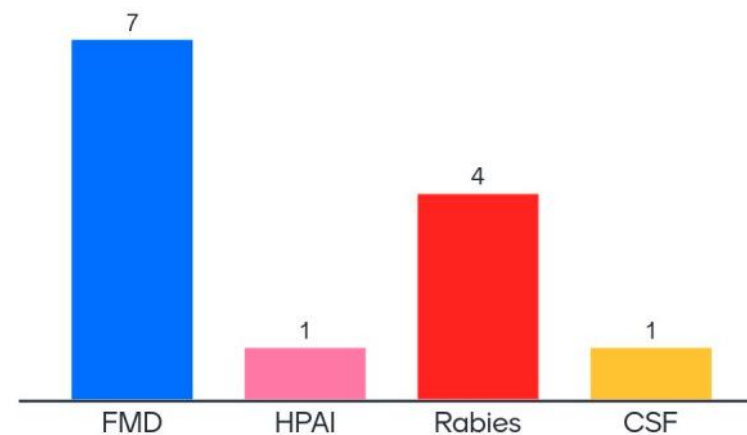

UPDATE ON THE INTEGRATION PROJECT ARAHIS and WAHIS

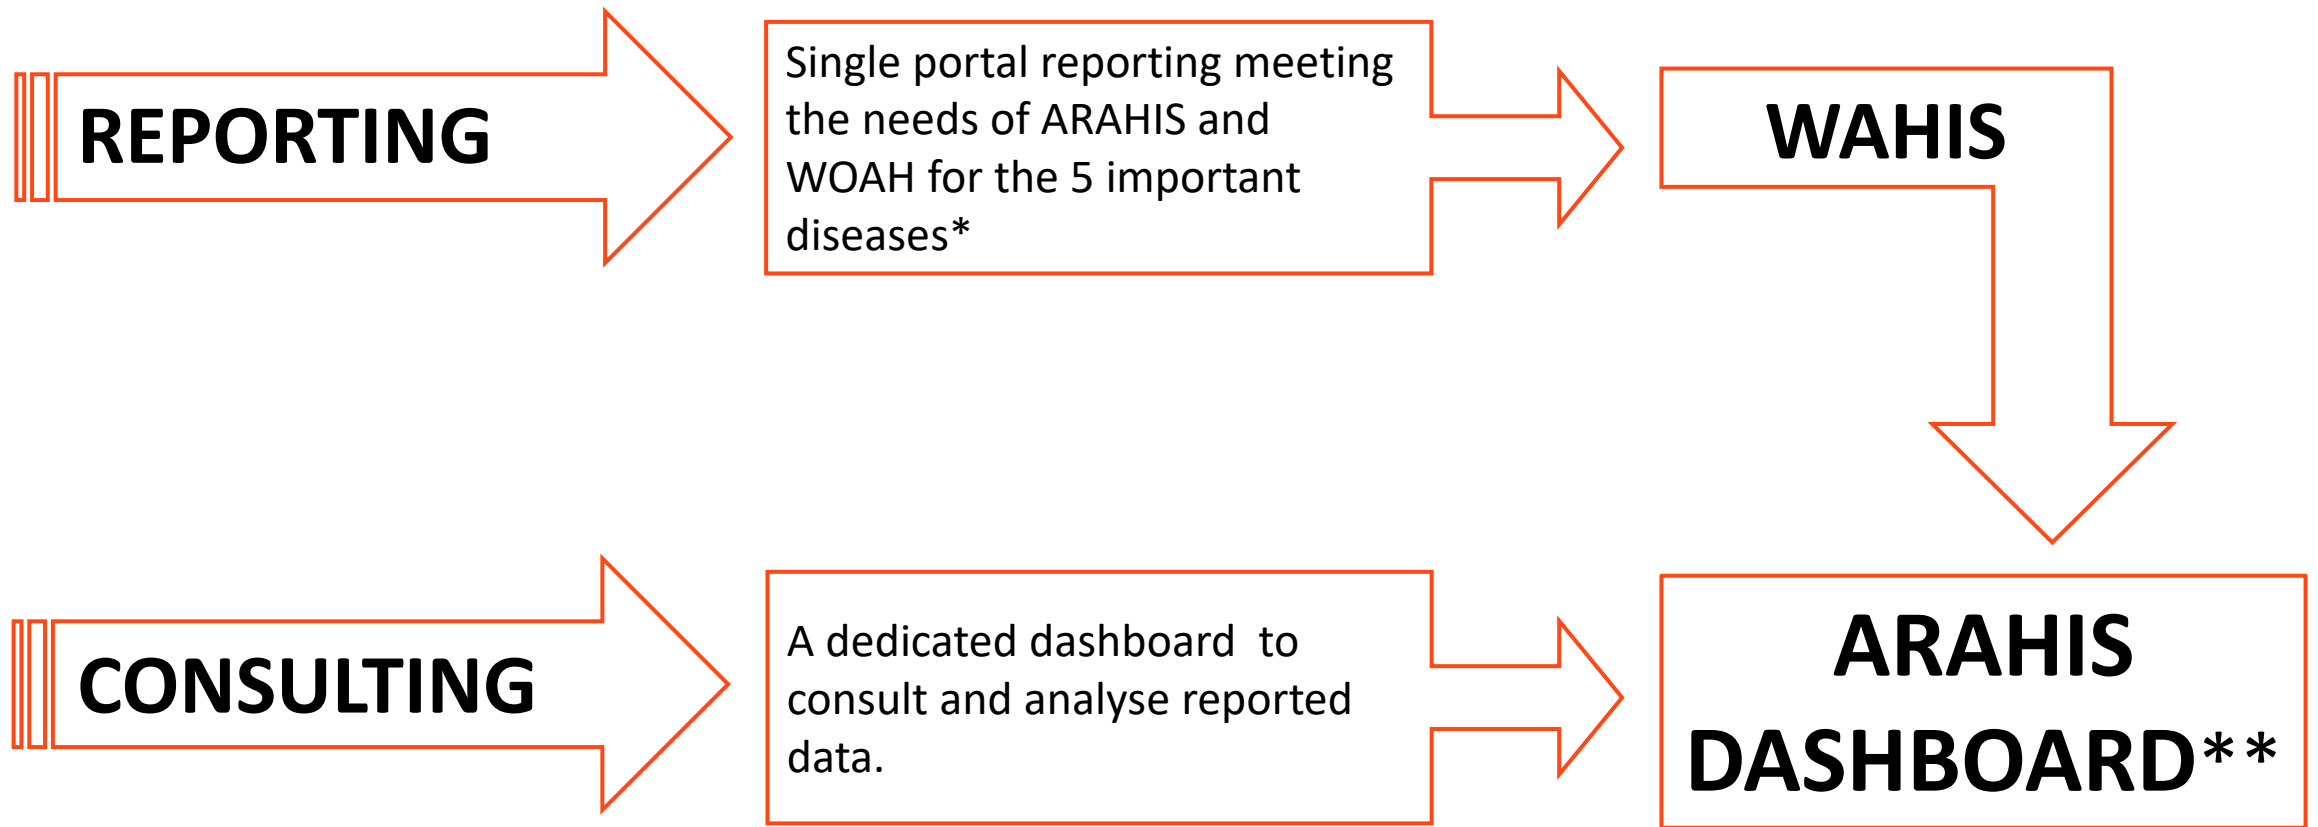

Ronella Abila, Sub-Regional Representative
South East Asia, WOAH

The Southeast Asia Livestock
Communication Group Workshop

23 – 25 April 2024, Phuket, Thailand

What diseases have you previously reported using ARAHIS

* FMD, AI, CSF, Newcastle disease & rabies. Two more diseases were added on 1/1/2025: ASF and LSD

* * Will be published on the website for ACCAHZ (not in WAHIS)

ARAHIS was decommissioned 31 December 2024

- SRR SEA archived all available data in the system (FMD data from 2015 to 2023).
- Key historical data from ARAHIS (FMD) can be made available via Excel spreadsheet if needed.
- An official letter has been circulated to AMS for them to download their own data if stored in the system.
- No migration of ARAHIS historical data to WAHIS.

FROM 1 JANUARY 2025

WHAT?	Initial	Subsequent
1. Confirmed listed disease previously absent or never reported (and/or previously reported through the early warning module)	Immediate notification through the early warning module then weekly follow-up reports until resolved or determined to be endemic.	If endemic, close event as stable then continue reporting in new event with monthly follow-up reports through early warning module.
2. Listed disease historically reported in WAHIS through the six-monthly report as present (endemic disease) with or without a stable event in the early warning module.	If no existing stable event, contact WOAHA for assistance . Begin with immediate notification through the early warning module then monthly follow-up reports; enter a note* in the epi comments	Keep the event as ongoing and update every month. Use 'no evolution report' if there have been no further evolutions.

Note: events reported through the early warning module will automatically transfer into the six-monthly report when this report is created; no alert will be sent in scenario 2.

* This event concerns an endemic disease in [country] but is reported through the WOAHA early warning module to accommodate ARAHIS (ASEAN Regional Animal Health Information System) reporting.

Stable diseases in the Early Warning module – why?

- Users consulting WAHIS Early Warning Module are informed of the presence or suspected presence of the disease in the country or territory, even if reporting is not up-to-date.
- For non-ARAHIS diseases, it indicates that detailed information is available only on a six-monthly basis for the disease and area covered by the event.
- 256 stable disease events in the EWM
 - 23 from ASEAN member states
 - 20 from ARAHIS diseases

Break

<https://wahis.woah.org/#/home>

Diseases: FMD, AI, CSF, Newcastle disease, rabies, ASF and LSD

For your country, consulting WAHIS, identify:

1. Which of the ARAHIS diseases are to be reported through the early warning module as exceptional events.
2. Which of the historically reported-as-present-in-the-six-monthly-report diseases are to be reported through the early warning module under the ARAHIS/WAHIS single entry point.
3. Which, of the latter, were declared stable through a final report.
4. Report back by country (to be captured by facilitators).

Lunch

Exercises

By group, consider the following scenarios and provide answers to the questions.

Participants will be divided into four groups

Each group will begin their exercise corresponded to their group number:

- Group 1 → Exercise 1
- Group 2 → Exercise 2
- Group 3 → Exercise 3
- Group 4 → Exercise 4

All groups will then complete all exercises in sequence.

The assigned representative from each group will present the results of their group's work.

Exercise 1

I am a Focal Point from an ASEAN Member State. In the second semester of 2024, I have reported infection with high pathogenicity avian influenza viruses (poultry) in my six-monthly report as absent. We did not confirm the disease in the first semester of 2025 either.

- **Considering the ARAHIS approach, what and where shall I report this in WAHIS?**

Exercise 2

I am a Focal Point of an ASEAN Member State. It is 19 August 2025. Since 1 July 2025 my country has an ongoing event for Newcastle disease in WAHIS.

- 1. What should I now do with this event considering the ARAHIS approach?**
- 2. What will happen with this information once I create my six-monthly report for the second semester of 2025?**

Exercise 3

I am a Focal Point from an ASEAN Member State. My country has historically been reporting rabies as present solely in our six-monthly reports.

We have had some cases in February 2025, March 2025 and June 2025.

1. How shall I now report using the ARAHIS approach?
2. What should I do for April and May 2025, as there were no confirmed cases?
3. What will happen with this information once I create my six-monthly report for the first semester of 2025?

Exercise 4

I am a Focal Point from an ASEAN Member State. My Delegate has just confirmed foot and mouth disease on a farm. My country never had foot and mouth disease or it was historically eradicated.

1. Where and what kind of report should I make?
2. What will happen with this information once I create my six-monthly report in WAHIS?

The disease has now spread, and my Delegate has decided that we should not continue an eradication strategy but instead monitor the disease as an endemic disease.

1. What should I now do with my existing event?
2. Where should I subsequently report?

Dashboard exercises

- **Menti meter Session**
- **Demo ASEAN Dashboards**
- **Discussion to improve dashboard**

Menti meter questions

31

1. Are you familiar with any of the WAHIS dashboards? Yes/No/Not sure
2. What would be the benefits of having an ASEAN animal disease dashboard ?
Open ended
3. Which animal disease would you like to have a real-time dashboard for?
Please specify the disease name
4. What features or information would you like to see on an animal disease dashboard? Please list

Objective of the ASEAN dashboards

Fit the needs of the ASEAN?

10.2 Progress on ARAHIS

49 The Meeting noted Singapore's presentation outlining the results of the survey on the use of ARAHIS by ASEAN Member states, as well as the potential benefits and challenges in integrating ARAHIS and WAHIS. The presentation appears as [ANNEX 27](#).

50 The Meeting agreed to align ARAHIS with WAHIS as one portal for disease reporting and noted that WOAAH will work to develop the data display/dashboard solutions for disease reporting, through the creation of an ARAHIS module in WAHIS.

Action Line: Singapore and WOAAH

6.3.2 Priority Deliverables of ASWGL for 2024

25. The Meeting agreed on the following priority deliverables of ASWGL for 2024 based on the activities in the Strategic Plan of Action for ASEAN Cooperation on Livestock (SPA-Livestock) 2021-2025. The Meeting requested Lead Countries to steer the development and implementation of the priority deliverables to ensure timely completion.

SPA-Livestock (2021-2025)	Lead Country
1. Activity: 2.1.2 a) Publish the report of the baseline survey on the incidence of CSF in the ASEAN region	Philippines
2. Activity 2.4.2 Make an inventory including a profile and mailing list of Veterinary Epidemiologists and other animal health professionals at least with a Master's degree and upload it on the website.	Thailand and ASEAN Secretariat
3. Activity 2.4.3 Make an inventory including the profile of ASEAN-accredited animal vaccine testing laboratories and upload it on the website.	Indonesia
4. Activity 2.4.4 Develop and update disease incidence maps using epidemiological survey data.	Singapore (To consider as there might be alignment

- Provide real time, data driven information
- Visualize Geographic Spread of disease and highlight high-risk areas
- Monitor disease trends and outbreaks, support targeted interventions

Extracts from Report of the 31st ASWGL, 2023

5 – 7 July 2023, Manila, The Philippines

10.2 Progress on ARAHIS

49 The Meeting noted Singapore's presentation outlining the results of the survey on the use of ARAHIS by ASEAN Member states, as well as the potential benefits and challenges in integrating ARAHIS and WAHIS. The presentation appears as **ANNEX 27** [attached]

50 The Meeting agreed to align ARAHIS with WAHIS as one portal for disease reporting and noted that WOAHA will work to develop the data display/dashboard solutions for disease reporting, through the creation of an ARAHIS module in WAHIS.

Action Line: Singapore and WOAHA

Extracts from Report of the 32nd ASWGL 16 – 18 July 2024, Singapore

28. Concerning the development and update on the disease incidence maps using epidemiological survey data, the Meeting noted that Singapore proposes to do this through the utilisation of the data extracted from the World Animal Health Information System (WAHIS), as the reporting of diseases of concern through ASEAN Regional Animal Health Information System (ARAHIS) will be integrated to WAHIS.

Action Line: Singapore

AGENDA ITEM 11. ASEAN LIVESTOCK INFORMATION AND COMMUNICATION TECHNOLOGY

12.1 Website on ASEAN Animal Health Cooperation

49. The Meeting took note of Indonesia's update on the progress of the development of the website including the functionalities and content of the website, which is attached as **ANNEX 22**

50. The Meeting agreed to replace the ASEAN Animal Health Cooperation Website (AAHCW) with the ACCAHZ website.

51. The Meeting agreed for Indonesia to continue to lead the development of the ACCAHZ website with potential support from FAO and WOAHA. Indonesia will develop a concept note outlining the resources needed to develop and operationalize the website.

Action Line: Indonesia and ASEC

12.2 Progress on ARAHIS

52. The Meeting noted Singapore's update on the proposed alignment of ARAHIS with WAHIS as one portal for disease reporting. This integration into WAHIS will prevent duplication in reporting and facilitate data utilization for developing disease incidence maps which could be hosted on the ACCAHZ website. The Meeting was informed that countries would be able to configure the early warning database in the WAHIS system to view reports from AMS; and that WOAHA would organize a demonstration and begin piloting in January 2025.

53. Considering that ARAHIS would no longer be operational in the future, the Meeting requested AMS to download their data from ARAHIS by December 2024 to preserve existing historical data.

Action Line: Singapore, WOAHA and AMS

Align with ASEAN Disease Control Strategy

34

FMD	HPAI	ND	CSF	Rabies	LSD	ASF
SEACFMD data	+			+Under ARES	+	+
SEACFMD roadmap	Yes	?	?	ARES	Yes	Yes

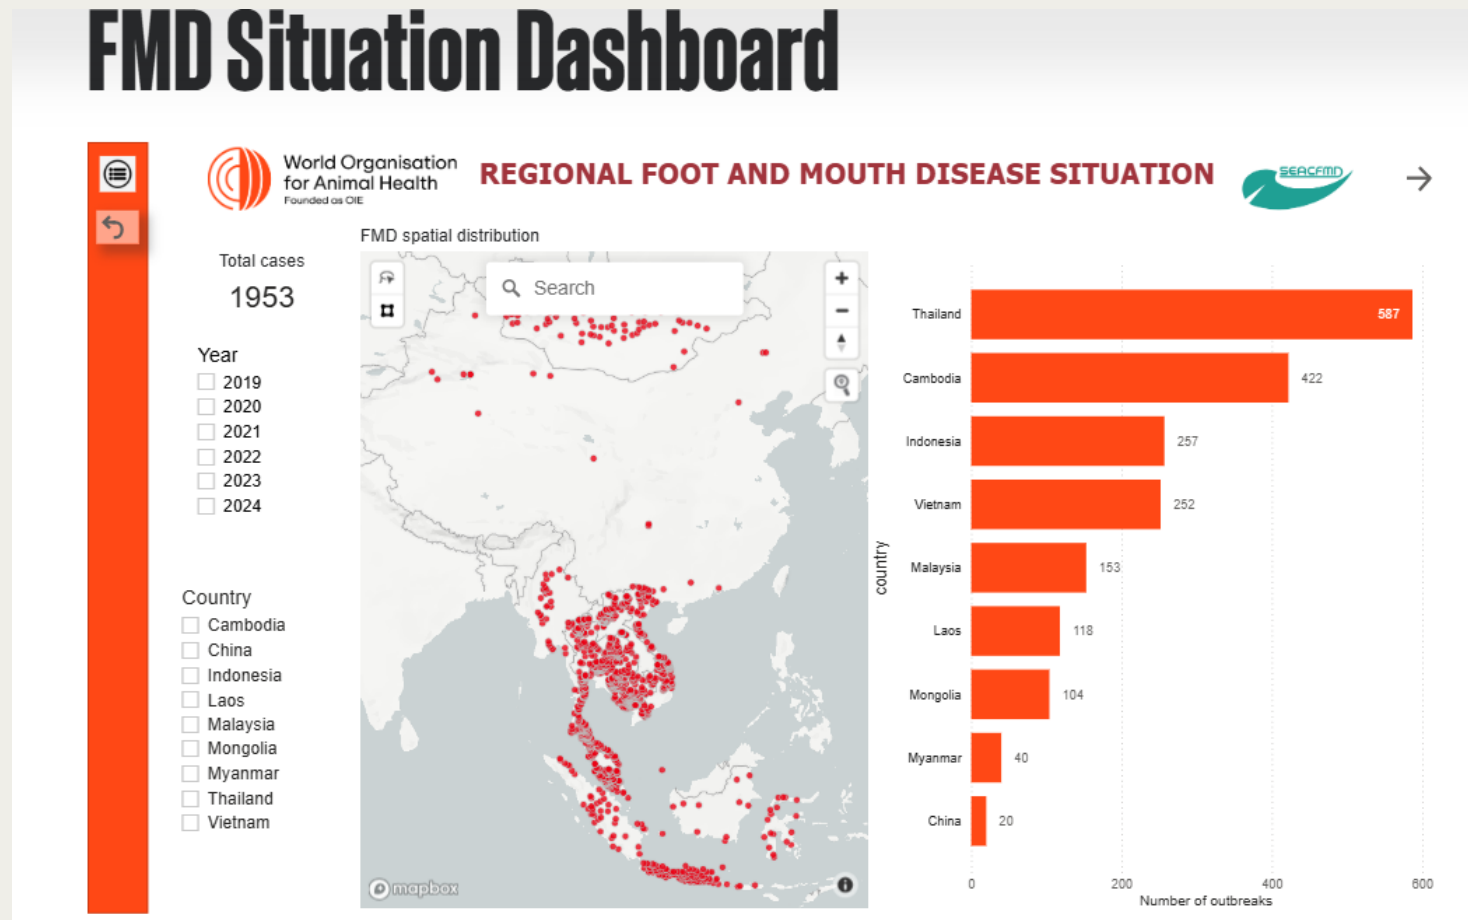

AMS are required to report LSD outbreaks via WAHIS within 24 hours and share information regionally through ARAHIS.

ASF outbreaks must be reported via the ASEAN Regional Animal Health Information System (ARAHS) and the World Animal Health Information System (WAHIS) within 24 hours of confirmation.

Members are required to submit six-monthly and annual reports on ASF presence and evolution.

FMD – FMD under SEACFMD: a dynamic dashboard is developed and running well.

Demo on ASF, LSD and HPAI
