

- PPR GREN (bureau and episystem WG) to agree with PPR secretariat on specific means the PPR GREN community can support actions taken in 2026 by the PPR secretariat to have countries implementing episystem identification, notably:
 - At what stage(s) should the GREN be involved in actions organized?
 - Should relevant GREN experts be invited to some actions?
 - **Ensure that coming operational workshops are followed by action plans agreed with countries, that would include research needs to be picked up by PPR GREN**
- Support actions to include production of phylogenetic analyses and tailored sequence databases that will help refining episystem identification
- **To develop protocols to assess efficacy of episystem approach for PPR surveillance and control**
- **Ensure that major work done on animal mobility, vaccination, and phylogenetics (notably cross-WG studies) are transferred to efforts for episystem identification**
- To adapt existing protocols to be used to collect data and refine first productions of episystems based on existing data
- To revise work plan
- Reflect on interest of policy brief
