

## FMD SITUATION (Jan 2020 to June 2021)

### FMD outbreaks and serotype distribution Jan 2020-June 2021

### FMD epidemic strains in Myanmar 2019-2021

- There were 4 outbreaks from January 2021 to June 2021, of which there are 3 O-type and 1 A-type.
- Affected animals were cattle (44%) and Goat (55%). Swine (0.001%) in Salingyi case
- Outbreaks were located in Salingyi township in Sagaing, Mahlaing township in Mandalay, Thanlyin in Yangon and Myeik in Tanintharyi Regions.

### Surveillance

- Active = 1050 samples
- Passive = 5 samples

### Vaccination

- 118,695

### Value Chain

- Study (Muse)

### Disease Free Zone establishment

### PVS

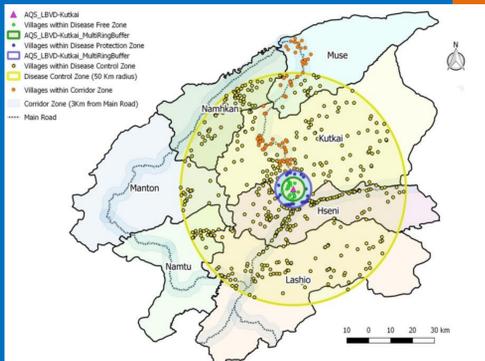

6 PVS missions

### Animal Movement

- Identification and certification

### Rapid Containment

- Set up Rapid Response Team (330 Tsp)
- Emergency response team

## FMD PREVENTION AND CONTROL ACTIVITIES

## Constraints & Solutions

Constraint	Solution
COVID restriction	CAHW workforce development
Illegal trade & movement control	Formalized border trade, animal ID and traceability
Vaccination and surveillance	PRA approach and resource mobilization
National Plan implementation	Disease free zone and disease control zone establishment

1. National Plan implementation (RBSP )
2. Surveillance
3. FMD Free /Control Zone with Vaccination Establishment
4. Laboratory capacity building
5. Movement Control
6. Animal Identification and Traceability
7. GAHP promotion

## Way Forward
