Integrated Surveillance

Priority Animal Diseases (TADs) and endemic production diseases

Chris Bartels
International Team Leader
Livestock Commercialization Project

Integrated Surveillance

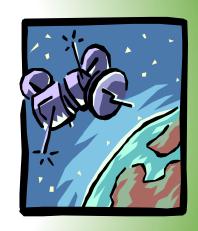

Priority Animal Diseases (TADs) and endemic production diseases

Data need to understand risks and routes of disease transmission

OBJECTIVES

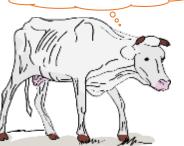

- 1. Evidence of absence
- 2. Early detection known diseases and emerging diseases
 - 3, Following trend in prevalence of known diseases

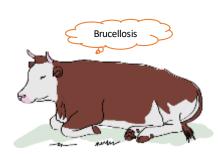

Establishing a
Veterinary Diagnostic
Veterinary Diagnostic
Laboratory Network
Laboratory quality
including quality
management and inmanagement and inhouse training

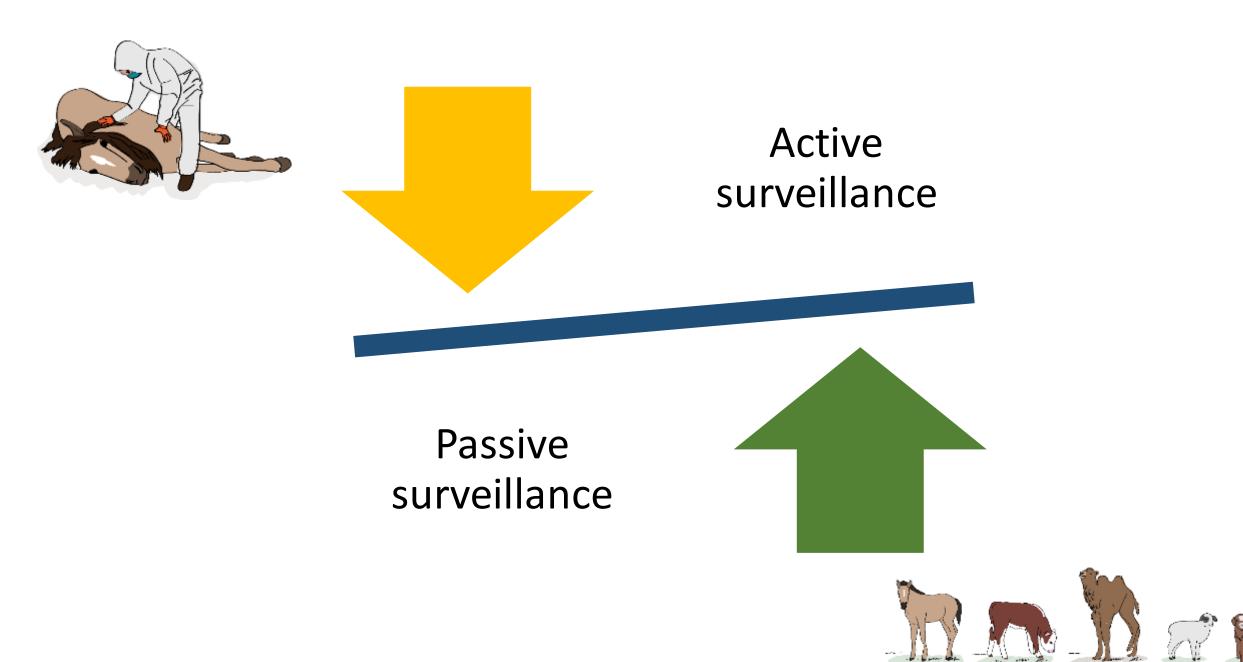

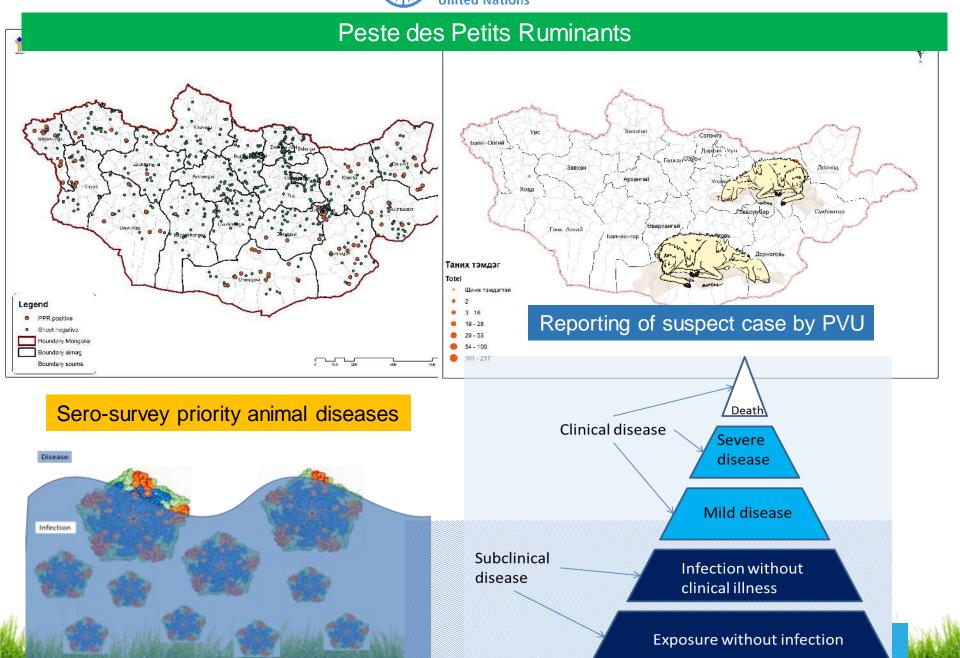

Lumpy skin disease

Post-vaccination monitoring for priority animal diseases

Sero-survey priority animal diseases

Wildlife surveillance (cross-sectional and sero-survey)

Slaughterhouse sero-survey

Risk assessment reports (Soum, Aimaig)

Zero reporting by PVUs at time of outbreaks

> PVU Clinical examination when applying for Veterinary Certificate

> PVU Clinical examination as part of herd visits

Reporting of suspect case by PVU

Helpline for Herders and PVUs

Passive surveillance

Disease a-specific

Little control over design – not representative

Wide coverage

Potentially timely

Small costs

Active surveillance

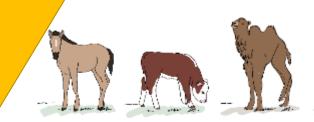

Disease specific

Control over design –

High inputs (time, people, money)

sampling and testing

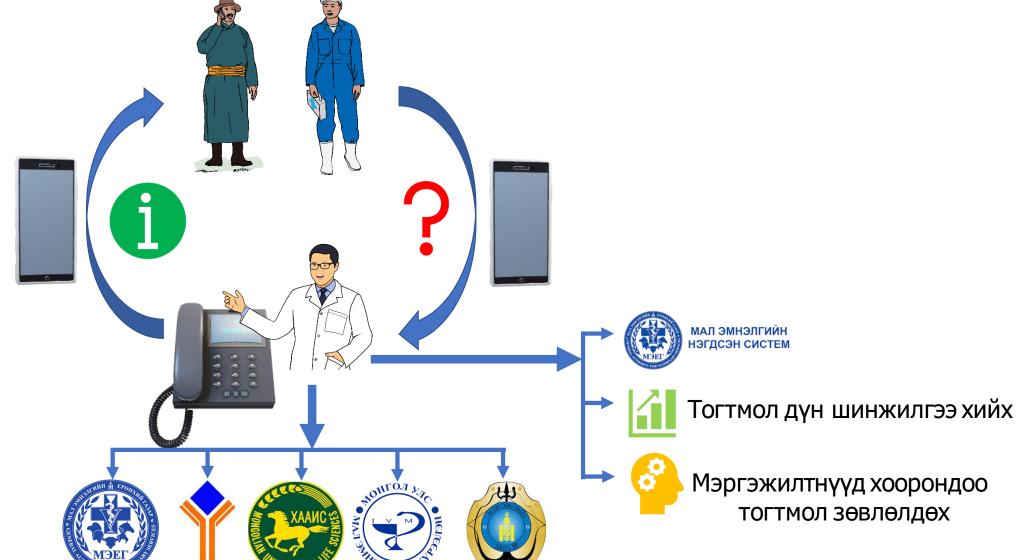

Coverage limited

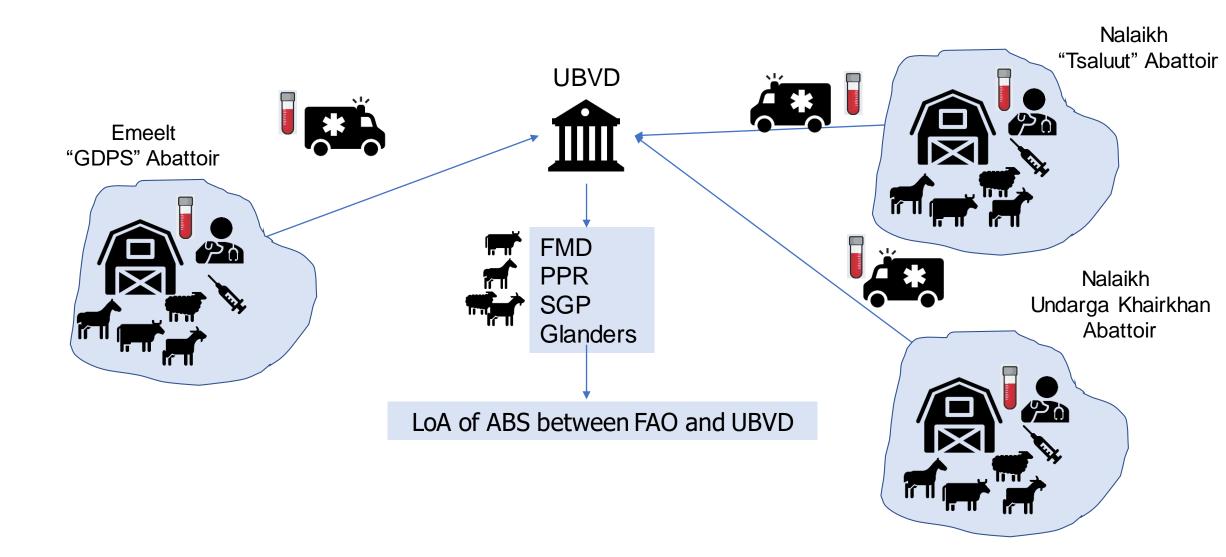

ТУСЛАМЖИЙН УТАС

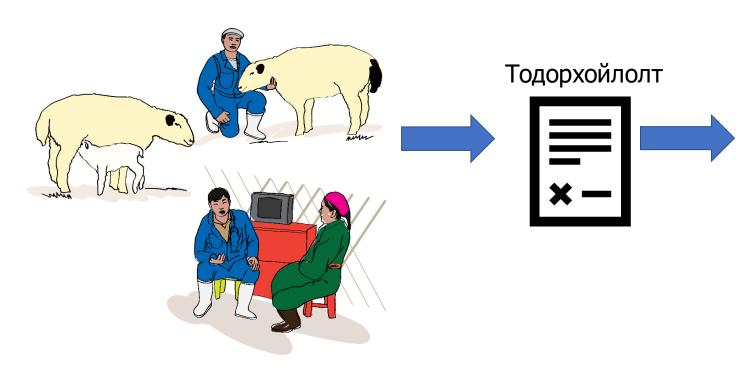

Abattoir surveillance

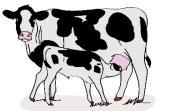

ТЭГ ТАЙЛАН

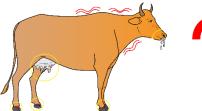

Сум/Аймаг/Төв

Ямар нэг эмгэг шинж тэмдэг илрээгүй

Ямар нэг эмгэг шинж тэмдэг илрэх

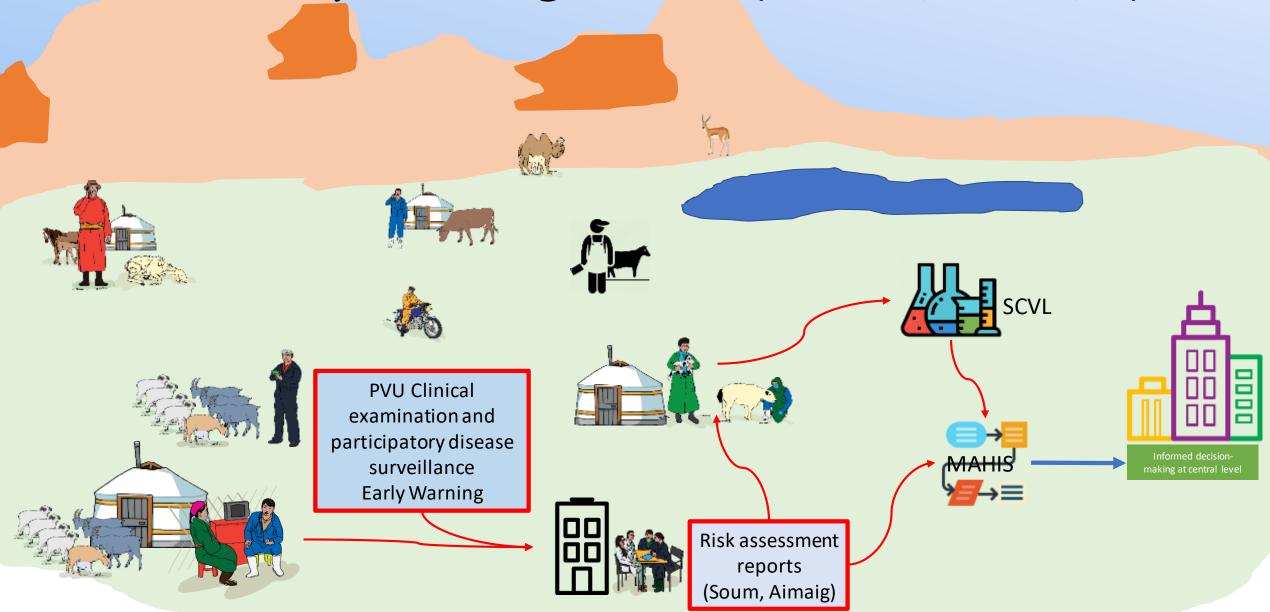

Хариу арга хэмжээ

- Ялгаварлан оношлох
- Онош баталгаажуулах
- Нэмэлт судалгаа, шинжилгээ

Early Warning and Response (EWAR) system

Early Warning and Response (EWAR) system Risk mapping allowing herders, PVUs, traders to understand location of highrisk areas Training and awareness raising SCVL **PVU Clinical** examination and participatory disease Informed decisionsurveillance Risk-based, effective ontrol measures making at central level **Early Warning Outbreak** investigation Risk assessment Risk assessment reports Impact assessment (Soum, Aimaig)

Training & extension

Annual certification of Quality Milk

Regular proof of absence of defined zoonotic and impact-full animal infections (testing)

Regular proof of absence of residuals of antimicrobials through testing

Applying practices focused on preventive management (biosecurity, feeding, hygiene)
